Ships Same Day

Product Description

3M™ Secure Click™ Organic Vapor Cartridge D8001 is NIOSH-approved to help provide respiratory protection against certain organic vapors. The D8001 organic vapor cartridges are for use with 3M™ Secure Click™ facepieces. Secure Click™ cartridges utilize dual flow technology for easier breathing. 3M™ Secure Click™ Organic Vapor Cartridge D8001 has the Secure Click™ connection style. The 3M™ Secure Click™ connection style enables a quick, simple connection of the cartridges. Simply align the connections on the facepiece

and cartridge and push until you hear a click. The innovative Secure Click connection helps provide wearers confidence that the cartridges are installed properly. Also, the Secure Click cartridges are dual-flow to allow easier breathing. Two dual-flow cartridges on each respirator combine to create four airflow paths in the world's first quad-flow cartridge system, providing greater breathability and comfort. The 3M Secure Click Organic Vapor Cartridge D8001 is NIOSH-approved for use against certain organic vapors when used with approved 3M™ Secure Click™ facepieces. Common uses for organic vapor cartridges include painting and for other applications where organic vapors are present. Refer to the 3M™ Respirator Selection Guide for a list of chemicals for which these cartridges can be used. The D8001 is not for use in environments that are immediately dangerous to life or health (IDLH), sandblasting, or in environments that contain particulates, unless combined with approved particulate filters. Change 3M Secure Click Organic Vapor Cartridge D8001 in accordance to your well-documented change-out schedule or earlier if smell, taste or irritation from contaminants is detected. 3M offers a free online tool to help you select the appropriate respirators, cartridges, and filters for your workplace respiratory hazards and contaminants and help determine cartridge change-out schedules
