FABRICATION SERVICES

In-House Fabrication

- **Wire Rope Splicing**
- **Wire Rope Swaging**
- **Spelter Poured Sockets**
- **Chain Slings**
- **Wire Rope Slings**
- **Synthetic Rope Splicing**

We stock 1/16" – 1-3/8" wire rope (larger sizes available upon request) and we can cut it to any length you need. We buy in bulk so you have the most options possible (most reels are 5,000ft or longer from the factory). We fabricate to your specifications, whether we are installing swage fittings or splicing eyes. We have three presses that reach up to 500T and accommodate up to 1-1/2" wire rope. We also have fittings for installation in the field, such as wedge sockets and Quick Nub ferrules. We can also sell or rent you hydraulic swagers so you can install swage fittings in the field, such as threaded studs, sleeves, stops and more. We also do spelter work in house, meaning we take molten zinc and pour it into end fittings to form a permanent bond with the wire rope (this creates the strongest possible termination).

We build slings daily, and we can certainly make high-quality, proper rigging slings for your job. Whether you need single or multi-leg sling bridles, we stock the necessary rigging in bulk to assemble the sling you need. No job is too big or too small.

We also splice soft rope in house, including 3-strand, single braid and double braid products. We represent fine manufacturers like Yale Cordage, Pelican Rope Works and Continental Western.

PULL TESTING SERVICES

Pull Test Capabilities

- **Test up to 225,000 lbs. & 33 ft.**
- **Instant Printed Certificates**

Introducing our new, state-of-the-art pull test bed! With automated touch screen controls, you can rest assured tests are being performed with the highest degree of accuracy.

Computerized graphing brings testing precision to a whole new level! Instantly printed certificates ensure you are OSHA Compliant and back to work fast!

When testing is completed, you will know with full confidence that your chains and slings have been thoroughly inspected and certified for safe and reliable use. All work is documented, with each item receiving a serial number for identification along with its certificate showing the testing and repairs (if any). We will also ensure your item has a permanent tag for ease of identification, or affix one if necessary.

With two locations to serve you locally, you can now avoid long distance freight charges and downtime. We will even pick-up, test, and deliver to select areas to further reduce the cost to you.*

Gear Inspections

We take safety very seriously! Proper equipment functionality is a must in any workplace. Failure to maintain your gear could result in serious consequences. That's why you can bring your gear in to be inspected by one of our trained safety experts, or in some cases, we can even inspect at your location, at no additional cost to you!*

If we find any damage or defects in the equipment, we can rebuild or replace your rigging to OSHA specifications. With over a million dollars of inventory and on-site fabrication, we can have you back to work quickly and safely!

* Restrictions Apply. Give us a call to inquire about eligibility!

DELIVERY SERVICES

On-Site Delivery

➤ **Fast Delivery** ➤ **Same Day & Off Hour Availability**

When you spend your days in the field, you often need a company that will come to you, and that's exactly what we do. We have two spool trucks for your delivery needs. We regularly spool wire rope onto logging yarders and cranes, so if you're anywhere near our two shops in Oregon, then give us a call and we can come to you!

And if you need, we can pick up your used line for you. Whether you want us to discard it, inspect it or store it, we will take care your line. That makes us an asset to your organization, a company you can trust to keep your operations running smoothly.

EDUCATION SERVICES

Inspection and Safety Training

Having the right gear is step one. Using that gear correctly is a very important step two. A safe working environment is not simply recommended, it's legally required. Proper training and implementation of your rigging and safety gear will help prevent accidents, reduce downtime and the risk of fines or legal action against you. Continuing the education of your workforce has proven to be the best way to mitigate safety hazards over the long run. And we're here to help!

We offer training in key areas that draw upon our years of experience and expertise. A typical rigging seminar takes about one hour and covers the real fundamentals of safe rigging. Our rigging seminars focus on the following key points:

- **Product Ratings / Working Load Limits**
- **Proper Sling Selection**
- **Sling Inspection**
- **Lifting Angles**
- **Examples of Misused / Damaged Rigging**

We also offer training for fall protection, and such seminars are usually put on by a representative from either FallTech or Capital Safety. These are the two manufacturers we proudly represent, and their factory-trained experts have the know-how to answer basic, and more complicated fall protection questions. Some basic points covered in every class are:

- **How to Wear a Harness**
- **How to Anchor Correctly**
- **Proper use of Connectors**
- **Fall Distance / Swing Falls**
- **Gear Inspection**

Let us know if we can help you with either type of course!
