New GK-3 Gen 3.0 Features

New Feature

Benefit

Drive Cable Assembly Eliminated by Moving Motor Closer to Point of Care

- Decreased power loss due to friction in the old drive cable assemblies
- Increases reliability due to simplified design

Digital Display for Speed Controller

Brings digital feature of premium legacy models to our standard model

More Complete Standard Applicator Package

No need to choose which applicator package to order. The G5 Deluxe Therapy Package includes our most popular applicators for physical and respiratory therapy

Lighter, More Mobile

We've reduced the weight of the GK-3 by 3.5 pounds (1.6 kg) which decreases shipping costs and allows for easier use.

FAQs (1 of 6)

Why are you discontinuing so many products at once?

By streamlining to a single, superior model, you'll benefit from better availability, faster service, and more consistent pricing. The GK-3 Gen 3.0 incorporates the best features from all discontinued models, meaning you get more value without having to choose between different product lines.

Why didn't you provide more notice before discontinuation?

We made this rapid transition to protect our customers from a 30-50% price increase caused by tariffs. Switching to the new model now lets you continue to receive a quality product without significant price increase.

Will the GK-3 Gen 3.0 truly replace all the functionality of the discontinued models?

Yes - you'll maintain all the therapeutic benefits of the exact same gyratory percussion while gaining new features like digital display and improved reliability. The only feature not included is the timer function from TherAssist and Vibramatic, which our research showed most practitioners weren't using. By eliminating this feature we were able to keep your costs down.

FAQs (2 of 6)

Do we need additional training or certifications to use the GK-3 Gen 3.0?

No additional training needed - you and your staff can start using it immediately. The familiar operation means zero downtime for your practice and no learning curve for your team.

What are the key improvements in the GK-3 Gen 3.0 over older devices?

You'll experience easier handling without the cumbersome drive cable, see precise speed settings on the digital display for better treatment consistency, and enjoy greater reliability with fewer service interruptions. The elimination of the drive cable means you can position the device exactly where you need it without fighting cable resistance.

How do prices compare between legacy devices and the GK-3 Gen 3.0?

Our engineering team was able to stave off price increases of 30-50% due to tariffs. Drive cable and motor vendors are raising our prices by 300% and 50% respectively. By innovating our stand machine design, we were able to offer our devices at similar prices as the last five years.

Why are you changing the design now?

Every challenge sparks opportunity. Confronted with increasing material costs caused by tariffs, we set out to protect our customers while raising the bar on performance. Six months later, we're proud to introduce a product that surpasses everything we've created before.

FAQs (3 of 6)

What happens to open quotes or pending deals with the discontinued models?

Your existing orders are protected - you can receive the model you originally ordered or upgrade to the new GK-3 Gen 3.0 at no additional cost. Simply contact Sales@G-5.com with your confirmation number to choose your preference.

How do I explain this change to customers who have been buying the legacy models for years?

You'll have access to a complete [Resource Folder](#) with professional materials - updated website images, specifications, and user manuals - making it easy to showcase the upgrade to your customers. Your clients will appreciate that you're offering them the latest technology at the same trusted price point.

How will inventory of parts and service supplies be managed for discontinued products?

Your existing equipment investments are protected with guaranteed parts availability for at least three years, ensuring you can maintain your current machines while transitioning to the new model at your own pace.

Can we still purchase discontinued models if we prefer them?

While discontinued models aren't available, the GK-3 Gen 3.0 provides all their capabilities plus improvements, ensuring you're getting the most current technology for your investment..

FAQs (4 of 6)

How long will service and spare parts be available?

You have at least three years of guaranteed parts support, giving you peace of mind and protecting your existing equipment investment while you plan any transitions.

Do warranties for discontinued products still apply?

Yes, of course!

Will integration with our existing equipment/systems be affected?

No changes needed - the GK-3 Gen 3.0 works with all your existing applicators and integrates seamlessly into your current setup, protecting your previous accessory investments.

Does the GK-3 Gen 3.0 have the same regulatory clearances/approvals as the older models?

Yes - you can continue treating patients without any regulatory concerns or paperwork. The same therapeutic performance (5mm percussion, 20-60 CPS) means no changes to your treatment protocols or insurance billing.

What support is available during this transition?

We are still here to help. The best way to reach us with questions or concerns is to email us at

Sales@G-5.com

FAQs (5 of 6)

What's the expected lifecycle of the GK-3 Gen 3.0?

You can expect 10-15+ years of reliable service - even longer than legacy models thanks to elimination of the two most common failure points (drive cables and speed controllers). This means lower lifetime ownership costs and fewer service interruptions for your practice.

Will the feel or performance be different from the older devices I'm used to?

Your treatments remain exactly the same - 5mm percussion at 20-60 cycles per second - so there's no adjustment period for you or your patients, and treatment outcomes remain consistent.

Is the GK-3 Gen 3.0 harder to use or heavier than previous devices?

It's actually easier to use - the handheld portion is lighter and more maneuverable without the awkward drive cable weight. Your practitioners will experience less fatigue during treatments, and positioning around patients is much simpler.

FAQs (6 of 6)

Are there financing or trade-in programs for upgrading to the GK-3 Gen 3.0?

Yes, if end-users ordered a stand machine in the last 12 months and would like to learn about trading up to the GK-3 Gen 3.0 they can reach out to us at Sales@G-5.com. They will need to be prepared to provide their Serial Number.

Will there be a transition period where both old and new are available?

Unfortunately, no. With the tariffs hitting small manufacturers particularly hard, we made the decision to move quickly to protect our customers from significantly higher prices.

What's the lead time on the new GK-3 Gen 3.0?

We are continuing to work through a backlog of stand machine orders but expect GK-3 Gen 3.0 orders placed today to begin shipping in Mid- to Late-October 2025. By November, we expect the lead time to drop to 5-10 business days.
