

Carbon FT-Arc™ Tower

The New Possible in Arc Flash Protection

The Carbon FT-Arc Tower is the next-generation harness built for tower climbers in the most challenging environments.

Designed with arc flash protection, this full-body harness meets ASTM F887 standards and is constructed with flame-resistant Kevlar®-reinforced Nomex® webbing, ensuring superior safety in high-risk environments.

Engineered for comfort and performance, the Carbon FT-Arc Tower features a revolutionary carbon fiber bosun seat, providing lightweight and form-fitting support when working at height. This seat operates in tandem with the breakthrough MDS™ modular deployment system. This FallTech innovation uses a powerful neodymium magnetic connector for effortless seat deployment and stowing.

The Carbon FT-Arc Tower delivers the premium design benefits expected from FallTech:

- ArrowGrip® D-ring plate that keeps your dorsal D-ring secure, minimizing adjustments throughout the day.
- Updated SRL attachment point for quick, hassle-free connection of single- and twin-leg SRLs without fumbling with webbing.
- Upgraded lanyard keepers that ensure secure, ANSI-compliant functionality for single and double-leg lanyards.
- Exclusive Comfort Legs™ lateral leg straps that enhance mobility and comfort by eliminating pressure points.

The Carbon FT-Arc Tower delivers the reliability and innovation that define FallTech. When the climb gets tough, trust the harness that's tougher—engineered to keep you safe, secure, and performing at your peak.
