EditTool software for the DVSTool control UI

IPX-925

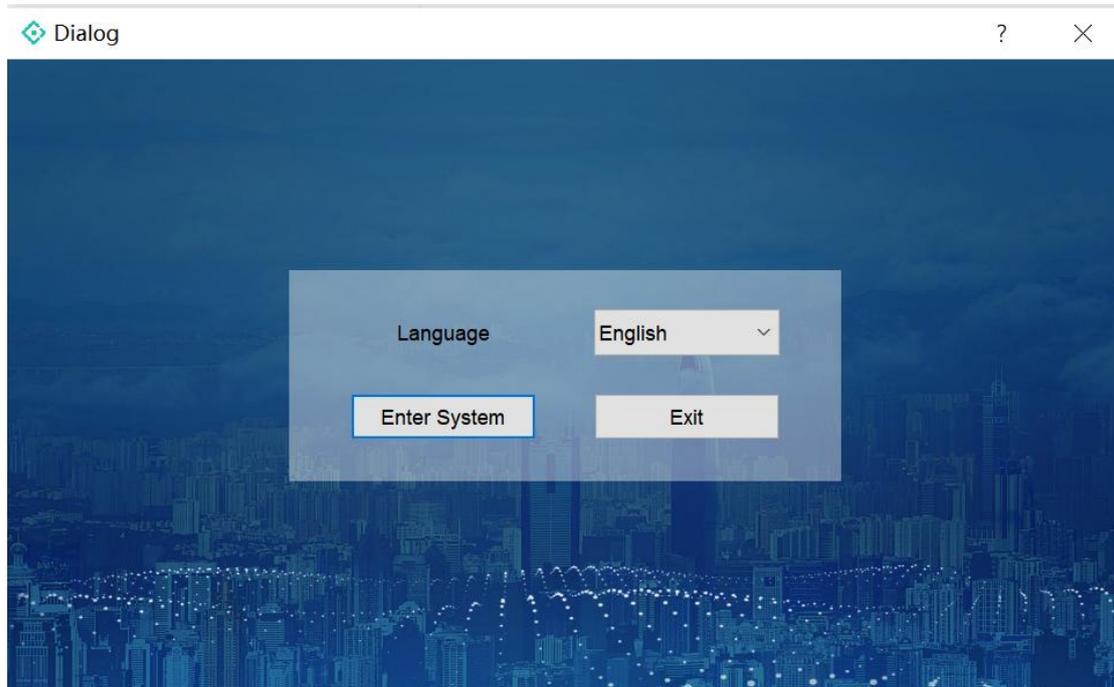

IPX-935

Version: V24.10.2

1. EditTool software

The EditTool software is mainly used for customizing the DVSTool software control UI, can click and run the software by click Enter System

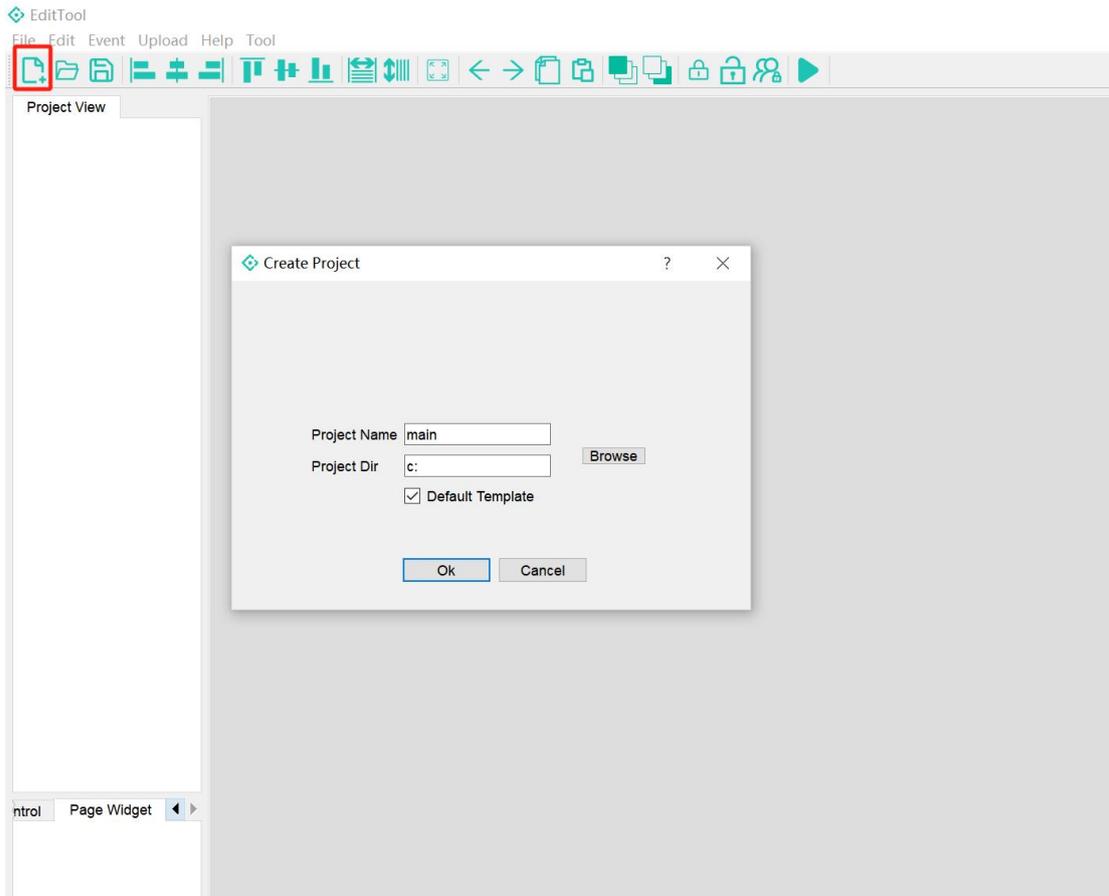

After enter the software, it will be showing as this:

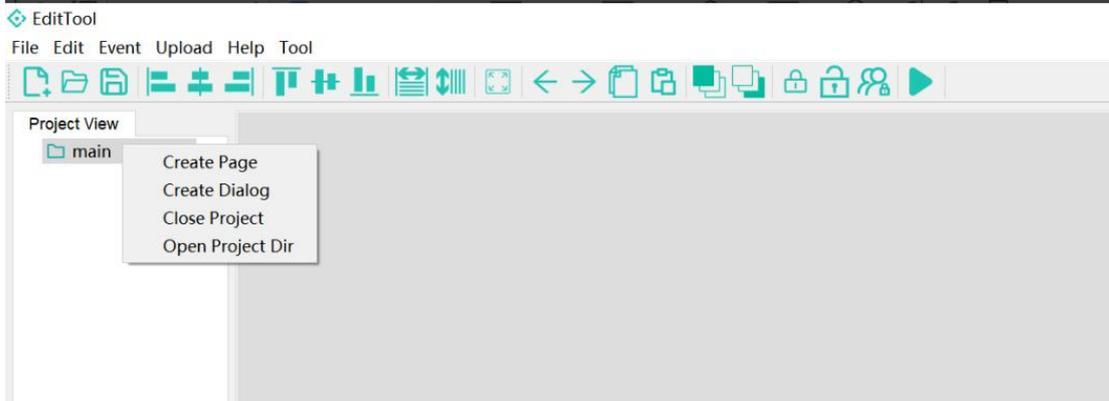

Then can start the project by:

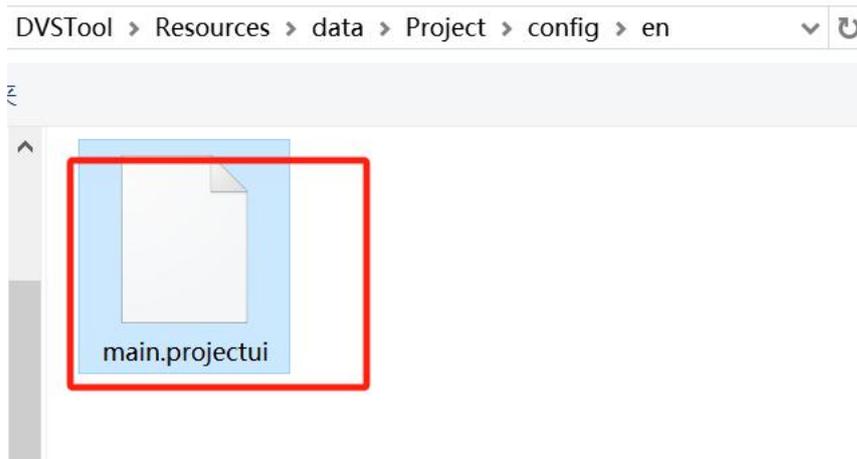

Option 1: to start a new project:

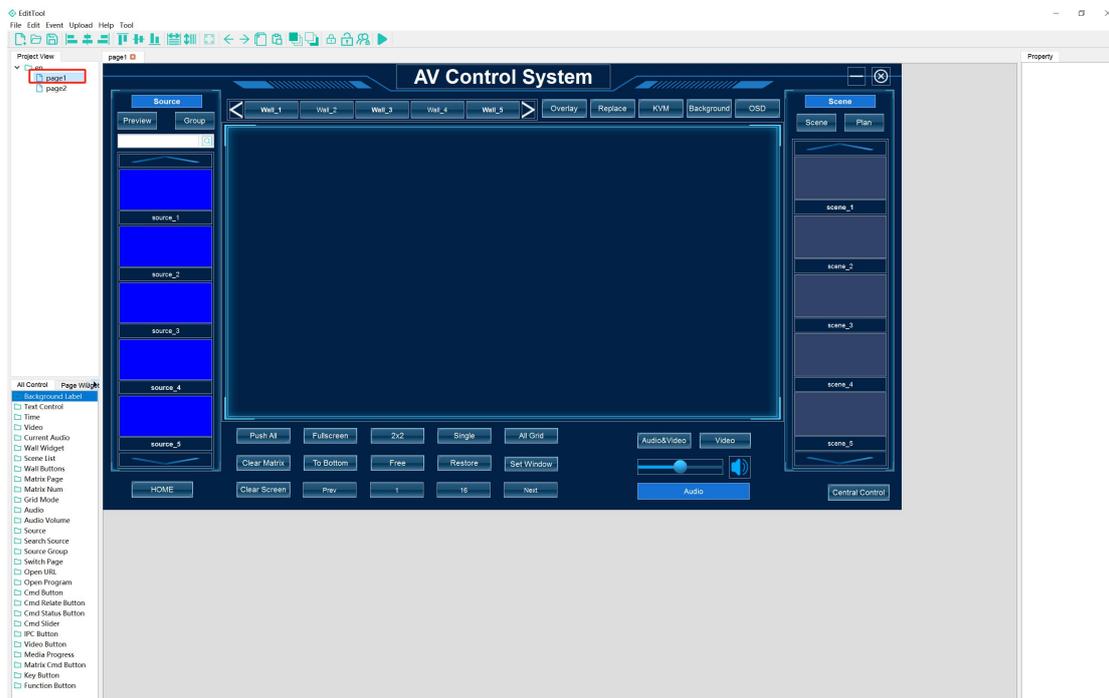

Then right click on the Main to add new pages:

Option 2: can open an exit project:

Then double click on the Page, it will show the page contents on the right side:

On the left side will be showing the control buttons, or can select any of the buttons on the UI to change/modify accordingly from the right side property list:

After all settings done, then need to click to "Save":

After saved the project, then can upload to the DVStool:

- 1) . Please note this upload will need to save the project first
- 2) . Also need to have the DVStool software running and open service from the Data setting tab:
