

Sensor Probe Replacement

Probe	SKU	Description
A		Old Legacy Probe
B	PROBE	SENSOR, TEMPERATURE - 30'
C	PROBE-M	SENSOR, TEMPERATURE - 12'
D	PROBE-S	SENSOR, TEMPERATURE - 18"

Due to supplier shortages, AP & Cumberland have replaced our original legacy probe sensor (A) with the new legacy PCB probe sensor with orange shrink (B). There will be no price changes, and this will be a running change over.

This updated sensor probe has key differences that differentiate between our edge probes and the new legacy probes. This new probe has the word “legacy” on the board inside the probe. The probe circuit board color is green unlike the edge probe which is red. There is also orange shrink wrap around the middle section of the new legacy probe.

Please contact your District Manager if you have any questions.
