

CW-9500 and CW-10272 End Kit Instructions

- Step 1:** Attach CW-3019 hanger bracket to support system. **Support system should be flush with edge of hanger bracket.**
- Step 2:** Slide coupler over water pipe and then slide end piece into coupler and attach to mounting bracket. Pipe does not necessarily need to be notched.
- Step 3:** Slide hose with spring over end piece protrusion and secure with clamp. Drop ball in stand pipe and insert flush cap into the top of stand pipe and secure with clamp.
- Step 4:** Thread swivel connector to end piece, ensuring hose washer is in place. Wrap 4-5 turns of teflon thread tape to barbed elbow and tighten to the swivel.
- Step 5:** Attach 3/4" garden hose (not included) to barbed elbow and run the hose up to a drain pipe.

The drain pipe should run down to an exit point outside the house, directly under the eaves. A separate drain pipe should be used for each line to prevent back flow from entering adjacent lines. (See Figure 1.)

Drain pipe must end at a point higher than five feet (5') to prevent siphon.
