

Waterproof Light Sockets

2200

Long-Lasting Thermoplastic Light Sockets

Eliminate the frustration of constantly replacing rusted or corroded light sockets. These thermoplastic light sockets are engineered to provide a durable, corrosion-resistant solution that performs reliably in demanding environments.

Designed to create a waterproof seal at both the junction box and the socket, these units effectively prevent moisture intrusion — the leading cause of premature rust and failure. The adjustable bulb height ensures optimal positioning and allows the bulb to hang straight down, even when installed on sloped ceilings.

For drop-ceiling installations, the socket can be mounted flush with the cover plate to maintain proper clearance while still providing a fully waterproof connection.

KEY FEATURES

- Thermoplastic construction for enhanced durability and corrosion resistance
- Waterproof seal at the junction box and the socket
- Adjustable bulb height for precise alignment
- Suitable for sloped and drop-ceiling applications
- Includes two cover screws per socket
- UL Listed for safety and compliance
