SOFT SHACKLES

All OVS soft shackles feature Dyneema, a low-friction fiber, so braided synthetic line will run easily through soft shackles, meaning you can often get away without using a traditional snatch block application where standard recovery isn't enough. Dyneema rope is so strong that an equivalent wire rope would be three times as thick. Our soft shackle can handle just about every function performed by a metal shackle, in many cases better. Soft shackles articulate better, don't rattle around when not under load, beat up bumpers, easier to undo, and don't have pins that fall out in the middle of a trail.

44,500 LBS.
MAX BREAKING STRENGTH

WORKS WITH OTHER RECOVERY GEAR

2.5" BLACK STEEL COLLAR

LIGHTWEIGHT DYNEEMA SYNTHETIC FIBER

STORAGE BAG INCLUDED
