

The Lloyd Flanders® Premium Outdoor Cushion System

The Lloyd Flanders® Premium Outdoor Cushion System re-defines outdoor seating comfort.

Our cushions feature exceptional comfort and resilience, inherently mildew/bacteria resistant components, and incorporate 1.5 density High Resilience California Fire Rated Foam.

Lloyd Flanders® cushions use Bio Comfort® Foam Core cushioning, made with soy based products. This reduces dependency on petroleum based products, for an environmentally friendly foam cushion.

The Bio Comfort® Foam Core is wrapped with 100% polyester fiber, a combination meeting the requirements of Tech Bulletin Cal. 117-2013.

Bonded to this foam and fiber wrapped core is a 100% polypropylene jacket completely encompassing the cushion.

The jacket is composed of two layers of spun bond fabric which sandwich an inner layer of meltblown fabric, hence the name SMS (spun bond+meltblown+spun bond).

Meltblown material is hydrophobic, which means to literally “shed water”.

Lloyd Flanders® Premium Outdoor Cushion System will provide years of comfort and pride of ownership.
