

LLOYD LOOM®

Our signature Lloyd Loom® material begins with a roll of cellulose fiber. The fiber is spun into a thin strand to create a spool. Over 500 spools of fiber strand are fed into one Lloyd Loom® to create our wicker fabric. Fiber is also spun around aluminum wire and cut to create stakes. Stakes are added during the weaving process for extra strength and resilience. The wicker is then given a flexible coating to protect it from moisture and prevent unraveling.

Lloyd Loom® wicker fabric is contoured over our sturdy, fully welded aluminum frames. Upholstered furniture is painted and heated in our Durium finish to ensure years of use. Finished furniture ships from our facility in Menominee, MI to discerning customers nationwide.

Patented in 1917 by Marshall B. Lloyd and updated by the Flanders family to meet modern demands, Lloyd Loom® is the most sought-after all weather wicker available today.

Lloyd Loom® is woven into different patterns to accentuate the designs of our collections.

*Each Collection uses a specific pattern,
or selection of patterns, labeled on each Collection.*
