

To assemble the pole & flag:

You will need them to join the pieces together in *increasing* size order. Start at the smallest piece, and work your way through to the biggest piece. Once all four pieces are joined, feed the tip/smallest part of the pole into the opening of the flag, slowly pushing the pole all the way through till it reaches the top of the flag.

To assemble the base:

Get the two black pieces and sit them on the ground, one on top of the other and position them in a X shape. Insert the silver bolt piece under the bottom of both black pieces, and then push the bolt through the circle in the middle. Take the silver spindle, insert it into the bolt and spin it clockwise as tightly as possible.

Tensioning the flag:

To tension the flag, simply clip the metal clip into the bottom metal eyelet.

Using the water Bag:

Simply remove the lid, fill with water & replace lid.
