

## CARING FOR YOUR CREMATION JEWELRY

Caring for your piece of cremation jewelry is easy! Using soapy water and a damp cloth on your **stainless steel** pendant will help maintain the metal's shine. A mild polish and polishing cloth will keep your **sterling silver** pendant looking radiant and bright!

Stainless steel pendants will not tarnish due to moisture or water exposure, but it is best to keep them dry to ensure the lasting bond of the adhesive and strength of the chain.

Sterling silver pendants will tarnish naturally over time, but can be easily cleaned with a jewelry cloth or mild polish. Exposure to moisture will speed up the tarnishing process and can be difficult to restore if your pendant is not cleaned regularly.

We recommend that you do not wear your cremation jewelry while showering, swimming, working out, or sleeping.
