

Protect Every Connection, Without the Premium Price Tag

PROTECT. CONTROL. DEFEND.

Cost-conscious wireless security for critical infrastructure, backed by over 40 years of industrial wireless expertise.

The ESTeem Edge 900 delivers enterprise-grade encryption and access control in a rugged, industrial-rated platform, so remote SCADA, PLC, and telemetry links stay protected — without inflating project cost.

1

Secure Data

Protect SCADA, PLC, telemetry, and serial communications with AES-256 encryption and proprietary communication links that make unauthorized interception and replay attacks significantly harder to execute.

2

Stringent Access Controls

Access to configuration and communication settings is restricted and managed, reducing the chance of unauthorized changes to a deployed radio in the field.

3

Purpose-Built for Critical Infrastructure

Operating in the license-free 902-928 MHz band with rugged, industrial-rated hardware and versatile outdoor, DIN, or cabinet mounting, Edge 900 is designed for dependable wireless communication for water, oil & gas, agriculture, and utility sites.

4

Network Isolation & Visibility

Built-in network segmentation keeps field radios logically separated from other traffic, while proactive monitoring through the ESTeem Utility and ModbusTCP helps catch security-relevant changes and connectivity issues early.

Engineered for reliability. Built for security.
Trusted for over 40 years
