

HANDLING & SAFETY

OVERVIEW

Safe handling preserves product integrity and protects personnel from chemical hazards.

Key Principles

- Always wear appropriate PPE (gloves, eye protection, respirators if needed).
- Avoid cross-contamination by using clean tools.
- Do not mix partial kits unless approved by manufacturer.
- Avoid dropping or puncturing containers to prevent leaks.

Best Practices

- Store Material Safety Data Sheets (MSDS/SDS) on site.
- Train staff in proper handling procedures.
- Keep fire extinguishers accessible for flammable materials.
