Mr. Kenneth Nevill  
Pacific Scientific  
11700 North West 102<sup>nd</sup> Road, Suite 6  
Miami, Florida 33178

Dear Mr. Nevill:

This is in response to your telephone call on December 13, 2001, in which you requested that certain parts be added to your approved variance letter dated December 12, 2001. You have requested that these parts be exempted from the regulations contained at 27 CFR, Part 55.

You have described these devices as being designed and intended for use in aircraft fire extinguishers. The devices are explosive cartridges that rupture a thin membrane and allow a gas contained in the extinguisher to be emitted on a flame. Furthermore, you indicated each of the below listed devices contain a maximum of 420 milligrams of explosive material.

In your letter, you provided a comprehensive listing of the devices, by part number, that you are requesting to be exempted by way of 27 CFR 55.32, Special explosive devices. All of these devices have been assigned the following United States Department of Transportation (DOT), approval numbers:

EX-0106015	EX-9507054	EX-8611120	EX-8701156
EX-8701111	EX-8701157	EX-9012166	EX-8701158
EX-9012167	EX-8704025	EX-9012168	EX-9012169
EX-9012170	EX-8701158A	EX-8701159	EX-8711182
EX-8711183			

Mr. Kenneth Nevill

You stated that all of these devices have the common and specific purpose to be used in aircraft fire extinguisher systems only. The devices all contain 420 milligrams of explosive material or less and that the devices vary only in external dimension.

After reviewing your attachments, we have determined that these devices, as described, do not pose a threat to public safety when possessed and used for their intended purpose. Therefore, we are exempting these items from the provisions of 27 CFR, Part 55, in accordance with the regulation at 27 CFR 55.32.

This exemption applies only to the items listed in your letter dated February 5, 2002 (attached to this letter). Any alterations to these items, or the manufacture of different items, will render this exemption void and necessitate a separate request for exemption.

Although we have determined that these devices are not regulated, the explosive materials used in their manufacture are subject to all of the applicable provisions of 27 CFR, Part 55. Any explosive materials removed from these devices are also subject to regulation.

This variance may be modified or rescinded should ATF determine that it poses a threat to public safety or causes the Government to incur additional costs to administer. This approval does not convey any rights or privileges contrary to any other Federal, State, and/or local law. A copy of this letter should be made a part of your permanent records and be made available for inspection by any ATF officer.

Mr. Kenneth Nevill

We trust that the foregoing has been responsive to your request. Please feel free to contact Specialist Chad Yoder in the Public Safety Branch at 202-927-7930 if you have any additional questions.

Sincerely yours,

Dear Mr. Constantino:

This is in response to your letter dated July 24, 2004, to the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF). You requested that we add several devices to your approved exemption letters dated December 12, 2001, and June 20, 2002. You have also requested that your completed cartridge-actuated devices be exempted from the regulations contained in 27 CFR, Part 555.

Your initial request was submitted in August 27, 2003. **Power Device Cartridge:** Explosive device to activate aircraft safety equipment

**Service Date:** The date in which the cartridge is considered in service.

**Service Life:** The length of time a cartridge may stay in service.

## **SERVICE INFORMATION LETTER**

### **6. DEFINITIONS -cont-**

**Shunt:** An insulating or grounding device that shields or grounds cartridges to prevent activation. There are two types:

Shunt Plugs ground each connector pin to the unit case preventing current flow to the bridgewire.

Faraday Cap insulates pins from receiving static current.

**Total Life:** The length of time a unit may be considered serviceable.

### **7. SHIPMENT INSPECTION**

Follow instructions in specific documents provided by the users organization as to shipment inspections of power device cartridges. Insure that all units are properly identified and packaging is not damaged. If the packaging is damaged inspect the cartridge per specific technical documents.

### **8. GROUNDING POWER DEVICE CARTRIDGES**

Find a location where cartridge handling can be processed without interference. This area must be free of stray electrical currents and a lot of foot traffic. Insure all needed ESD components are available at this station. How ESD components are stationed is left to the station operator. How and why ESD components are used must be clearly understood before any cartridge operations begin. Follow guideline from ANSI or IEEE.

### **9. DESCRIPTION AND OPERATION**

#### **A. Description**

Cartridges are power devices that are used to start a pressurized fire extinguisher's flow. Although there are two groups within these devices Pacific Scientific produces only the modern shock wave device.

The shock wave device produces a wave that breaks the enclosure disc or stem holding a plug. They can be found in hermetic or non-hermetic sealed units.

#### **B. Operation**

When a fire extinguisher is deployed a specified electrical current is routed to the cartridge. Current flows through the connector pins, into the bridgewire, making the bridgewire hot causing the power to ignite and produce a shock wave that ruptures the disc or housing of the fire extinguisher.

#### **C. Specific Data**

See Attachment Information Table 1

## SERVICE INFORMATION LETTER

### 10. UNIT INSPECTION

Visually inspect all areas of the cartridge. Check for distortion on threads and electrical plug case. No cracks or dents allowed on cup area. Insure all pins will allow electrical plugs to engage. There should be no loose parts on the unit.

### 11. TESTING AND FAULT ISOLATION

**WARNING:** Insure all shunt devices or safety caps are installed before handling any cartridges.

**WARNING:** Testing of all cartridges should be accomplished while cartridge is install in the applicable safety fixture. See tool and fixture table for correct application.

#### A. Electrical Test

Extensive testing is conducted when each unit is manufactured. Pacific Scientific recommends that testing be limited to fault isolation only and only the areas to confirm faults. Connect test equipment to applicable pins and apply values per Electrical Schematic Diagram.

### 12. REPAIR

Repair is limited to the straightening of electrical pins. Electrical testing must be completed after the pins are corrected not prior to correction.

## **SERVICE INFORMATION LETTER**

### **13. STORAGE**

Cartridges must be stored with shunt plugs or safety caps installed. They should be kept in a sealed anti static bag. New units are received from Pacific Scientific in the correct configuration. Units should be kept in a dry area below 100F and above 70F. see local regulations for Class S explosives.

### **14. TRANSPORTATION**

The following agencies are the regulatory bodies governing the transportation of cartridges. International Air Transport Association (IATA) Dangerous Goods Regulations DOT 49 CFT 173, Subpart C International Maritime Organization (IMO) Also consult any state or local regulatory bodies. Pacific Scientific Cartridge Exemptions EX 0105187, 0105188, and 2002030115 allow 1.4C cartridges to be shipped as 1.4S if packed in the stated manner. Please see the Pacific Scientific web site: [www.pacsciarni.com](http://www.pacsciarni.com) for information and packing supplies.

### **15. REMOVAL OF OLD OR DEFECTIVE CARTRIDGES**

Cartridges are considered HAZMAT material and should be disposed of with that process. Consult certified HAZMAT waste removal companies to remove all cartridges.
