

CARE OF BLANKETS AND CUSHIONS

We make functional timeless pieces which we hope will be used every day and cherished for years to come.

Here are some quick tips on how to care for them:

Cleaning:

We recommend professional dry cleaning for all our blankets and cushions. There are now Eco dry cleaning options available, so have a look in your local area for recommendations.

Avoiding Clothes Moths:

Clothes moths love dark and undisturbed spaces. In order to deter them, we would recommend very gently shaking your blankets and plumping your cushions regularly. You will probably find that you are doing this in any case as you make your bed or tidy your sofas and armchairs. For longer term storage please see below. There are also many different types of moth repellent on the market.

Storage:

Blankets and cushions should clean and dry before they are put into long term storage. Wrap your items appropriately in a sealed bag or container to protect them from clothes moths and dust.
