Performance Lowering Springs
Installation Instructions

Thank you for your purchase of this Hotchkis Performance product. Your Lowering Spring set was designed with the performance and durability you've come to expect from Hotchkis Performance.

Note: Please read the entire installation instructions before starting. Having the right tools will ensure a smooth install process.

LOWERING SPRINGS INSTALLATION

Front

1. Jack the front of the car up and place the car on jack stands. Remove the front wheels.

2. Remove the brake line bracket.

3. Remove the ABS line from the bracket.

4. Unbolt the sway bar link and remove.

5. Remove the two (2) bolts that hold the spindle to the strut and separate the spindle from the strut

6. Either use wire or something else to restrain the spindle so the brake line and ABS sensor wiring does not get pulled on.

7. Now remove the four (4) upper mounting nuts for the strut. Just before removing the last nut, support the strut to ensure it from not falling.

8. Safely remove the strut assembly.

9. Using a spring compressor, compress the spring and remove the upper spring cup nut.

NOTE: Use caution when working with a spring compressor!

10. Remove the stock springs.

11. Remove the coil spring isolator from the old stock coil spring and install it on the new Hotchkis coil spring at the same position.

12. Put in the new Hotchkis coil spring.

NOTE: Make sure the end of the spring is up against the stop. If the spring is not seated properly you will not achieve the correct ride height. Also make note to how the coil spring isolator is installed where some of it overlaps the first coil where it is bare.

13. Compress the spring and attach the mounting plate. Ensure proper alignment of the mounting plate and the bottom of the strut by the notch and the lower strut mount and then apply thread lock, and tighten the nut. Please refer to the following pictures for clarification.

14. Place the strut back on the car and repeat on opposite side.

Rear

1. Jack one side of the rear of the car up slightly while maintaining the wheel with some contact with the ground. This is just done to support the car while the lower strut bolt is removed

2. Unbolt the lower strut bolt on the slightly raised side. You May need to disconnect the sway bar end link for access to the lower strut bolt.

3. After bolt is removed, fully jack up the slightly lifted side until the suspension drops down and support the lifted side with a jack stand. There should be a flat area to place the jack stand in front of the rear lower control arm.
4. Remove the coil spring.

5. Install the new Hotchkis coil spring.

6. Lower vehicle to compress the spring and align the lower strut mount and tighten mounting bolt. Tighten the sway bar end link if necessary.

7. Fully lower the vehicle and repeat to the other side.
