History

Superior Fruit Equipment was founded in 1995 in Wenatchee, WA, the heart of the fruit growing region of the Pacific Northwest. We manufacture four of the most well-known and respected brands in the professional tree fruit industry: Hickok Pruning Tools (established in 1928), Vaca Shears (established in 1912), and Wells & Wade Harvest Equipment (established in 1922) and Fanno Saws (established 1920).

Today, we operate out of our 35,000 square foot building in East Wenatchee. Our location gives us instant access to feedback from users of the tools we manufacture. We are proud to be the sole lopper manufacturer in the USA.

Products

We proudly manufacture our loppers in the USA. Our picking bags and buckets are manufactured both in the USA and in Taiwan. We utilize the latest technology to manufacture the highest quality tools available to the professional tree fruit industry. We only use the finest materials, and all replacement parts are readily available to extend the life of the tools.

Distribution

Our products are sold through stocking dealers located in the various fruit growing regions of the world and now arborist supply stores. We are not structured to mass produce lower quality products to compete in the discount arena. Because of this, our products are only available from those sources that offer the finest quality merchandise for the discriminating buyer. In addition to manufacturing and distributing Hickok Loppers, Vaca Shears, Fanno Saws and Wells & Wade Harvest Equipment we also distribute professional orchard, tree, and vine care products from ARS tools, Manzana Clippers, Vesco Pruning Tools, and Antonini Knives.

TREE & VINE LOPPERS

MADE IN THE USA

- **STRONG ALLOY STEEL**
For a tough, durable, incredible edge
- **ADVANCED HEAT TREATING PROCESS**
Unique to Hickok and Vaca tools
- **LIGHTEST PROFESSIONAL PRUNING TOOL**
Up to 30% lighter than competition
- **ALWAYS "USER FRIENDLY"**
Current parts still fit our 1991 shears
- **MADE IN THE USA**
American craftsmanship since 1928
- **LIFETIME WARRANTY**
For the useful life of the tool

Blade is designed to cut right at the peduncle
- Ergonomic design**
Fits comfortably in hand; curved design helps reduce fatigue

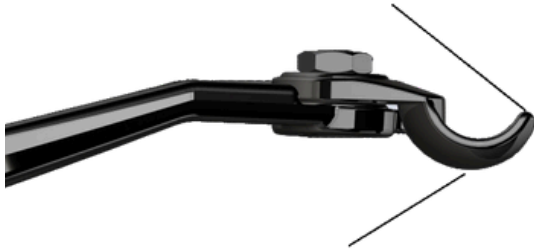

- Curved & rounded tips**
Avoids punctures to the skin of the fruit
- Counter-blade relief**
Avoids scrapes & scratches to the skin of the fruit
- Carbon steel**
Allows steel to be heat treated for optimum strength & durability

FRUIT STEM CLIPPERS

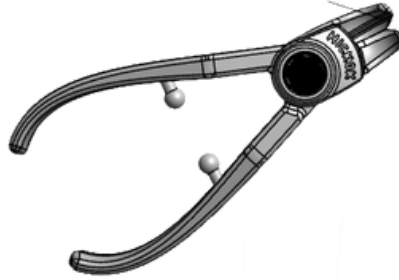

HICKOK FRUIT STEM CLIPPERS

Rounded tips ensure there are no apple punctures.

Small radius cutting edge allows clipper to clip the stem down inside the bowl of the apple.

Open tips require proper angle to clip helping to prevent clipper punctures

FC-200

- Puncture proof design
- Deeper bowl and rounder tips compared to FC-100
- Prevents clipper damage
- Ergonomic design

Designed for apples!

FC-300

- By-Pass blades to cut stem
- Puncture proof design
- Effortless cutting for less fatigue
- Deeper bowl/ rounder tips compared to FC- 200

FC-SS

Hickok Stem Stopper

- Stop damage from clipped stems
- Fits FC-200 & FC-300
- Stainless steel
- Sold separately or attached

*Holds stem until released outside of your bag or bucket.

KEEP CLIPPED STEMS OUT OF YOUR BAG, BUCKET, AND BIN!

MADE IN THE USA

WARRANTY POLICY

Superior Fruit Equipment warrants to the original purchaser that the products we manufacture and sell are free from defects in material and workmanship for the useful life of the specific tool. Normal wear or incidental damage to the tool from use or maintenance is not covered. We reserve the option to repair or replace any product returned under warranty and only if, in our judgement, the product has not been misused or altered inappropriately.

The product must be returned to the factory freight prepaid with a copy of the original invoice. After inspection, repair or replacement we will ship the product back freight by like method.

Regarding Hickok and Vaca loppers: Superior Fruit Equipment will replace parts that have failed due to defects in materials or workmanship. We will not replace parts that have been abused or misused, including:

- Blades filed razor thin with the factory cutting bevel removed
- Aluminum handles bent from attempting to cut material too hard or too large
- Wood handles broken
- Hook or blade tangs broken at the top of the handle

Extensive laboratory testing shows that when a lopper is subjected to excessive cutting force but the handles are kept in alignment, the blade/hook tang fails through the top bolthole. This is a rare occurrence with the handles normally breaking (wood) or bending (aluminum) first. A tang broken above the top bolthole indicates that side loading or twisting occurred and the resulting torque breakage is not covered by warranty.
