

WeldCloud Fleet

Welding Equipment Fleet Management System

Monitor all connected machines

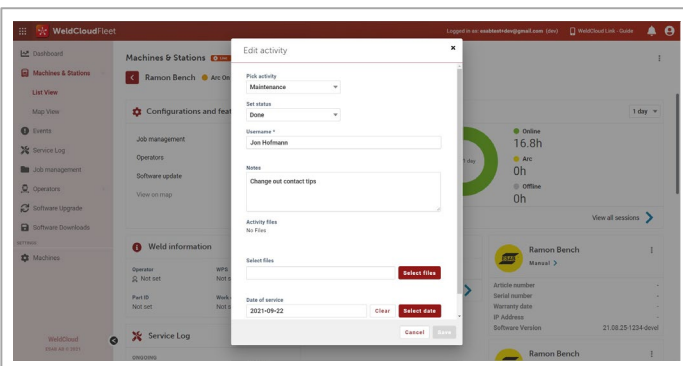

WeldCloud Fleet is a digital application designed to manage your fleet of welding equipment across one or multiple locations. Reduce downtime, manage maintenance and service, and monitor welding jobs for every machine in the fleet. WeldCloud Fleet provides the right set of tools to keep operators in control of connected ESAB equipment and other brands of welding machines. Use WeldCloud Fleet as a stand-alone service application or bundle with WeldCloud Productivity for a complete welding data analytics system.

Industry

- Transportation
- Mobile Equipment
- Ship/Barge Building
- Pipe Mills
- Windtower
- Steel Erectors
- Structural Steel Fabrication

- Welding job management – manage your welding jobs across your complete welding fleet
- Service log – plan, document and be reminded about service, maintenance and calibration activities
- Remote software upgrade – no need for manual or USB upgrades, which can take hours or days
- GPS location of your welding equipment – know where all machines in your fleet are at all times
- Event log - early detection and notification of equipment issues
- Operator Management - manage your operator permissions across your fleet of welding machines

Visit indusuite.com for more information.

The service log provides you with what you need to plan for and follow-up with in your service and maintenance activities

Remote software upgrade for all connected devices in minutes

WeldCloud Fleet

WELDCLOUD SYSTEM

Communication between welding machines and WeldCloud Productivity software is quick and secure, providing product traceability necessary to drive continuous productivity and quality improvements. This bi-directional communication enables the user to pull in schedules and procedures.

Once the ideal process procedures and settings are locked in place in one machine, a user can update their entire fleet to those same settings via WeldCloud Productivity and confirm machine setup. More than a data recording system, WeldCloud Productivity helps provide analysis including dashboards that allow customers to gain insight immediately.

WELDCLOUD LINK

WeldCloud Link mobile application for Android is compatible with the WeldCloud Universal Connector. WeldCloud Link brings increased levels of traceability to each weld session with barcode scanning of filler metals, gases, and parts. The application also allows users to easily configure new WeldCloud-enabled welding equipment. For the best experience, use with Zebra TC57 and TC77 mobile devices with IR scanner.

WELDCLOUD UNIVERSAL CONNECTOR

The WeldCloud Universal Connector allows customers to simply connect almost any MIG/MAG or TIG power source to WeldCloud Productivity and WeldCloud Fleet. For more information about WeldCloud Universal Connector, please see separate fact sheet.

Requirements	
Hardware required	ESAB Aristo 500ix, 4004 or 5000 power source, or PEK controller with Weldcloud gateway. The gateway can also be added as a retrofit to these systems.
Network requirement	Internet access to device through Ethernet cable or via 802.11n WiFi.
Device for accessing application	Any device with internet access, an up-to-date web browser and preferably at least 8-inch screen size.
Device to use for setup and system configuration	Any device with Android 8.0 Oreo or newer
