How to Read Wheel Offsets

Wheel offset is the measured distance between the hub mounting surface and the center line of the rim.

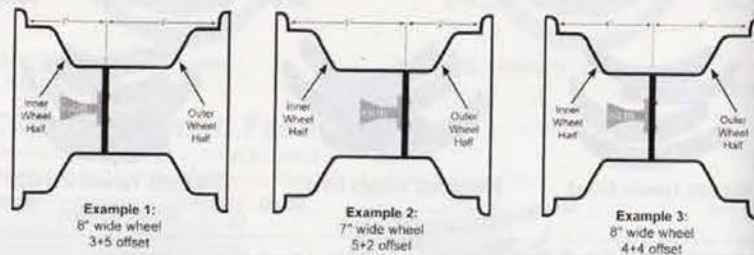

Wheels are usually stamped with their offset using the German prefix "ET", meaning "Einpresstiefe" or, literally, "press depth". This number is typically given in Millimeters (mm). An example would be "ET45" for a 45mm offset.

The offset can also be given in inches and is typically expressed with numbers like "3+4". The first number refers to the distance from the inner wheel half to the hub mounting surface while the second number refers to the distance from the hub mounting surface to the outside wheel half.

A **positive offset** occurs when the hub mounting surface is on the street side (the side you see) of the center line of the rim. When the hub mounting surface is "centered" within the rim, it is known as a **zero offset**.

If the hub mounting surface is on the brake side of the center line of the rim, it is considered a **negative offset** or "deep dish".

Below are some examples of how to read offsets:

SIZING EXAMPLES					
-15mm =	-22mm =	-25mm =	-35mm =	-47mm =	3+4 offset =
-0.61024 inches	-0.86614 inches	-0.98425 inches	-1.378 inches	-1.8504 inches	3" inner + 4" outer

Why Switch to LED Lights?

- Solid state LED lighting is both energy efficient and long lasting.
- LED design focuses light in a specific direction for better illumination.
- Unlike halogen lights which go out when the filament breaks, LED lights can last up to 50,000 hours.
- Because they contain no glass components, LED lights are not vulnerable to vibration or breakage like halogen bulbs.
- Instant on and improved performance in cold temperatures.

*A resistor spark plug is required for proper operation with these ignitors. Failure to use a resistor spark plug may prevent a vehicle from starting, causing rough idling, misfiring, backfiring and abnormal combustion. The failure to use a resistor spark plug may also cause damage to this ignitor and will void warranty on this unit.

DC voltage converter/reducers provide a 12V source from your battery pack to run all of your accessories. Connects to entire battery pack instead of just one or two batteries, which improves the life of the batteries. No more having to install separate buss bars to split power. Installing accessories is as simple as crimp and go.

TIRES & WHEELS

Golf cart tires and wheels can be a confusing product to shop for – with so many variations and styles to choose from, how do you figure out what’s right for you? Our Tire & Wheel Fitment Guide is here to make choosing tires and wheels easy.

Tire Sizing

Most tire sizes are in the following format: 25x10-14. The first number, 25, is the full diameter of the tire – how tall it is in inches from top to bottom. The second number, 10, indicates how many inches wide it is. The last number, 14, is the size of the center of the tire – in other words, what size wheel will fit the tire. Therefore, an 25x10-14 tire is 25" tall, 10" wide, and can fit a 14" wheel. Another size format you may encounter is the automotive format, which looks like 225/30-14. In this case, the first number, 225, is the tread width in millimeters. The second number, 30, is the aspect ratio (30 = % ratio to tread width), and the third number, 14, is the size of wheel it can fit in inches.

TIRE TREAD CLASSIFICATION

Street / Golf Course
Offers the smoothest ride on pavement, and is a popular choice for turf applications.

All Terrain
Handles light off-road duty when needed, while also providing a good ride quality on pavement.

Agriculture & Off-Road
Aggressive tread blocks provide the ultimate off-road performance on muddy or rocky terrain.

HELPFUL TIP

Golf carts with over 18" diameter wheels should be lifted to fit the cart properly. Lifted carts will have wheels with a negative offset that allows for better turn radius and stability. This means that the tires will stick out from the wheel well. To prevent mud and dirt from flinging up from the tires, we recommend adding on fender flares.

Nomad

GTW 14" NOMAD TIRE

Introducing the newest addition to the GTW tire lineup. The GTW Nomad is a true all-terrain tire with great performance and wear regardless of your terrain. It offers an optimal tread pattern with integrated sipes for excellent grip and reduced road noise. The aggressive side-wall pattern improves traction and corner stiffness. It also features large shoulder blocks that are scalloped to eject water & debris and is DOT approved Steel Belted Radial. Whether you're riding loose sand, hard pack, mud, or just riding around the neighborhood, the GTW Nomad gives you the freedom to roam.

Features:

- DOT approved Steel Belted Radial
- Aggressive all-terrain design
- Large, scalloped side blocks for increased rigidity and grip
- Asymmetric tread for improved contact and reduced road noise
- Great for all driving conditions and weather
- Strong rubber compound for great durability and impact resistance

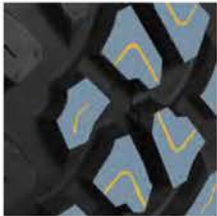

SIDEWALL AND SIDE BLOCKS

Large scalloped side for increased rigidity and grip. Robust sidewall tread for impact protections as well as loose terrain.

IMPROVED TREAD

Asymmetric tread for improved contact and reduced road noise.

INTEGRATED SIPES

Integrated sipes throughout tread for improved traction in wet conditions.

84" & 120" VERSA TRIPLE TRACK TOP

This new ABS top is designed for maximum strength and durability with a lower profile to provide additional overhead clearance. Our new design reduces the previous top height by 2-1/2", providing extra clearance for lifted vehicles through garage doors and low clearance openings. The ABS construction provides additional strength & resistance to heat.

NEW Item

The Low-Profile Top comes equipped with our aluminum Triple Track system for easy installation of our enclosures and other available track accessories.

Features:

- New 2-1/2" Lower Profile Height
- Durable & UV Protected ABS plastic resists the elements
- Structured design prevents sagging and warping
- Rain channeling to shed water away from occupants
- Includes industry exclusive aluminum Triple-Track for easy enclosure and accessory integration
- 84" length for 4-passenger & 120" length for 6-passenger vehicle coverage.
- Struts and mounting brackets sold separately
- Uses current Triple-Track mounting kits
- Replace part number(s) for 84":

WINDSHIELDS

NIVEL WINDSHIELD STYLES AVAILABLE

Nivel windshields have been produced in America since 1993. Our high-quality windshields are made in our Manufacturing Center of Excellence in Cairo, GA. Each folding windshield is assembled using a patented adhesive process for the continuous hinge. We box every windshield individually for damage-free shipping with protective film applied to both sides. All mounting hardware is provided in the false bottom of each box. Some versions are available with a foam rubber trim gasket to seal to your cart's cowl. Also available are windblockers and air dams to help effectively eliminate wind drafts from above the windshield.

Acrylic

These cost effective windshields are constructed using 0.168" nominal thickness OPTIX Acrylic

1/4" Acrylic

Same as the standard acrylic, however cut using 0.220" thicker material, for a more robust windshield.

1/4" Tampa G Acrylic

Similar to the thicker 1/4", but incorporates a Black Hinge that mechanically fastens using plastic rivets.

Vented 1/4" Tampa G Acrylic

These have an adjustable vent feature that allows air to flow while the windshield is in the up position.

Winged 1/4 Acrylic

The winglets provide more protection and coverage by extending beyond the frame width. In addition, this feature increases the windshield rigidity.

Impact Modified

Made of impact modified acrylic with a higher resistance to shatter than regular acrylic. It's nominal thickness 0.177" OPTIX Impact Modified Acrylic

AS4/AS5

These meet US D.O.T requirements, Most "Street Legal" and LSV (Low Speed Vehicles) specify these. They are only available in flat one-piece configurations. Identified by the certified stamping – lower left corner. It's nominal thickness 0.177" Polycarbonate Hard Coat.

VENTED WINDSHIELDS

Who likes rain in their face when driving? Our flexible design allows you to protect yourself from the elements while getting some fresh air with our adjustable air vents. Each vent on this windshield is adjustable and tightens with a locking thumb screw, allowing you control of how much airflow is coming into the cart. Then on those hot days, you can fold down the windshield for maximum ventilation.

Specifications:

- High-quality 1/4" thick acrylic
- Snug, vibration-free fit
- Rubber trim at the bottom
- Left and right vents for additional airflow
- Installation hardware included
