IN-LINE INERTIA DRIVEN® SYSTEM

STEP 1: CHAMBERING

As the bolt assembly moves into battery, the locking head pin moves along a curved track in the bolt body to rotate the steel bolt head into engagement with the steel barrel extension.

STEP 2: FIRING

When the trigger is pulled, every part of the shotgun except the bolt body moves rearward. The curved track in the bolt body, which is moving forward relative to the rest of the gun, presses against the locking head pin, turning the bolt head even tighter into the barrel extension. At the same time, the inertia spring is compressed between bolt head and body. The cartridge drop lever moves up, allowing a shell to move from the magazine to the carrier.

STEP 3: RECOIL

Near the end of the recoil cycle, chamber pressure drops to a safe level and the gun's rearward motion slows. The heavy inertia spring then thrusts the bolt assembly rearward, unlocking the rotating bolt head, extracting the spent shell from the chamber and pulling it against the ejector.

STEP 4: EJECTION

As the empty shell exits the receiver, the energy of the moving bolt assembly re-cocks the hammer and compresses the recoil spring. The recoil spring then thrusts the bolt assembly forward, lifting the on-coming shell into position and chambering a fresh cartridge. The gun is ready to fire again in a fraction of a second!

“THE LAW OF INERTIA” — is Newton’s First Law of Physics and is as consistent and unchangeable as The Law of Gravity. Benelli has harnessed this basic law of physics in the Inertia Driven® system to operate the world’s fastest, simplest and most reliable semi-automatic shotguns. It’s not boasting, it’s the law — The Law of Inertia.

The Vinci's In-Line Inertia Driven® action's bolt and rotating bolt-head operates simply and efficiently on a single axis. This innovative design means reduced movement during recoil, resulting in less muzzle climb for quicker follow-up shots.

THE VINCI REDUCES MUZZLE CLIMB BY 42% AND IS 68% FASTER TO RECOVER AFTER EACH SHOT.

SHOOT... RECOVER QUICKLY... SHOOT AGAIN FASTER.

The real performance timeline of "speed" involves more than just the rapid cycling of the action. It must also include:

- quickness of mount
- instant recoil recovery
- immediate target acquisition
- rapid follow-up shot
- short crisp trigger pull
- and **ultra reliability!**

The Vinci's In-Line Inertia Driven® system cycles shells faster than ever. But, to take advantage of this speed, it was necessary to reduce recoil and minimize muzzle climb. To accomplish this Benelli developed the ComfortTech® Plus system, which **decreases muzzle climb by 14 to 42 percent** and as a result, **quickens recovery time to let you get back on target 40 to 68 percent faster** than the competition. Without adding weight, ComfortTech® Plus also allows the Vinci to retain superior balance when shouldering and firing the gun. You'll be busting the second clay or knocking down that next bird while your shooting partner is still recovering from his first shot. The practical "speed" shooters seek becomes a matter of how fast you can shoulder the gun... acquire the target... shoot... and recover from recoil to prepare for the next shot. This is the real timeline of performance speed where the **Vinci has no equal.**

QUADRAFIT™ BUTTSTOCK MODULE:

The polymer QuadraFit™ Buttstock Module with ComfortTech® Plus connects directly to the receiver by a simple turn-and-lock, steel-to-steel attachment. This allows a quick assembly and disassembly. Vinci's QuadraFit™ Buttstock Module customizing system allows easy adjustment of drop, cast, comb height and length-of-pull in a matter of minutes.

COMFORTTECH® PLUS RECOIL MEASUREMENTS

Benelli engineers developed specialized machinery to measure and graph recoil. Here a Vinci is plotted along with 4 Competitors. A dramatic reduction with ComfortTech® Plus can be seen in all three peaks of recoil—firing, bolt cocking the hammer and the end of bolt travel.

The Vinci does what many thought was impossible; it is both the lightest gun in its class and the softest-kicking. Imagine how fresh you'll be at the end of a long hunting day with that combination!

MR1 RIFLE - 5.56MM NATO (.223 REM.) - COMFORTech®

ITEM # 11801 Black synthetic

The MR1 rifle is chambered in 5.56mm NATO (.223 Rem.) and uses the battle-proven ARGO system—the same system developed by Benelli for the M1014 and used for over a decade in multiple conflicts by the United States Marine Corps. The ultra-reliable ARGO (Auto-Regulating-Gas-Operated) system incorporated into the new Benelli MR1 gets the job done for the U.S. military, and now can be the centerpiece of an effective home defense plan. All steel parts are black phosphated and aluminum parts are hard-anodized in a matte finish.

Aperture sights are military-style, adjustable for windage and elevation in the field, using a cartridge rim. A Picatinny rail allows mounting of both conventional and night-vision sights, while retaining metallic-sight capability.

The Benelli carbine comes standard with a five-round magazine. The MR1 can also accept standard AR 15 magazines.

Optional Picatinny front tri-rail kit is available for mounting a laser aiming device, front handle, illuminator and other accessories.
