

SECTION 1000-GENERAL SPECIFICATIONS

LIGHTING

Proper lighting is critical in your retail store and should not be compromised in any way. The **Style Encore** store requires:

- 100-foot candles in the selling and back-room areas
- 200-foot candles over the checkout
- T-8, SP35, color corrected lamps are required (cool white)
- Prismatic Lens (not parabolic lens)
- Track Lighting to highlight Marketing

To maintain this level of light, one 2' x 4' three lamp fixtures (or 8' two lamp fixture) should be placed every 64 square feet, or 8' center to center. Refer to your store drawing for a suggested lighting schematic. Please note the lighting schematic provides good general lighting. City codes and current ceiling conditions are not necessarily taken into account. The lighting plan is not intended to be custom targeted lighting for the initial store design. Instead, it is designed for the best overall lighting coverage to flex with racking needs over the years. Be sure to review the layout with your electrician to best adjust the lights to avoid potential dark isles.

ELECTRICAL

All stores need duplex outlets 20' on center around the perimeter of the store.

- A minimum of one outlet is required above the front window for an "OPEN" sign. It will be the franchisee's choice as to the exact location.
- One 20A dedicated circuit with isolated in ground conduit, orange in color, is required at each point of sale for the computer system.
- Up to three duplex outlets are required to be installed at cabinet locations.
- One phone jack on a 4-wire line is required at each cabinet location.

Local codes should always be considered first and foremost! *

SECTION 1000-GENERAL SPECIFICATIONS

COMPUTER

NETWORK CABLE:

Enclose as much of the cable as possible in PVC pipe to protect it from wear. If network cable gets stepped on, wet or kinked, there is a very good possibility it will not work. Do not run the cable through the same conduit as electrical or telephone wire. This could cause interference in the computer network. If the cable needs to be run across the ceiling, keep the cable at least 6 feet from fluorescent lights. If you must cross fluorescent lights, do so at a 90-degree angle.

POWER:

The computer outlet should be a dedicated 20A circuit with isolated ground, orange in color, to distinguish it from the others. If you have a computer in an office or other workstation away from your main P.O.S. counter, they should be on the same circuit. If your computer is not plugged into a battery backup unit, you need to have the computer, monitor and printers plugged into a surge strip designed for computer equipment. The computer with your modem should have a phone surge plug as well.

PAINT

Paint is Sherwin Williams brand and is to be purchased by the store owner.

- Morris Room Gray #SW0037 semi-gloss or eggshell (wall behind P.O.S.)
- Natural Choice #SW7011 semi-gloss or eggshell (all non-P.O.S. and non-Focus Area)
- Porpoise #SW7047 semi-gloss or eggshell (Focus Area)

**Paint doors and door frames the same color as corresponding walls.

***See your elevation drawings (F2) for specific directions for your store

CARPET

The carpet for your new store is a patterned commercial carpet. Therefore, special consideration must be given when choosing a carpet installer. The carpet mill will not honor claims for carpet installed by non-certified installers.

Installation Qualifications: Patterned Carpet Installation should be accomplished by a Floor Covering Installation Board (FCIB) certified firm or an installer who can demonstrate compliance with the FCIB certification program. Call 800-882-8846 for verification or certification. Another option is to visit www.cfiinstallers.com Other valid certifications are Floor Covering Installation Contractors Association (FCICA) and the International Certified Floor Covering Installers Association (CFI). The installer must meet or exceed C-1 or C-2 classification.
